BINDING INSTRUCTIONS

This issue of Nuclear Science Abstracts contains Title Pages, Binding Instructions, a Cumulative Table of Contents, an Author Index, a Subject Index, and a Nuclide Index for Volume 5 and a Numerical Index of Reports listing the availability of reports abstracted in all five volumes of Nuclear Science Abstracts and in the two volumes of its predecessor, Abstracts of Declassified Documents. In addition, there are a list of the Depository Libraries and a list of NNES volumes published. The pagination of the cumulative indexes and of the lists is a continuation of the pagination of Volume 5.

In binding Volume 5, the Tables of Contents, Reports Reference Lists (numbered with Roman numerals), and the indexes (denoted in the earlier issues of the volume with letters and in later issues as Index-1, etc.) which accompanied each number of Volume 5 should be discarded for they are superseded by the cumulations contained in this issue. Those wishing to retain a listing of the table of contents of the NNES volumes which have appeared in Volume 5 may find it convenient to remove these pages and bind them with this cumulation. The pages on which these listings appear are indicated in the list of NNES volumes published.

Three title pages have been provided so that the volume can be bound in one cover or in two covers for greater convenience in handling.

CUMULATIVE SUBJECT INDEX

The underscored number followed by a colon is the volume number, and the numbers following are the abstract numbers. In some cases, where a large list of references is grouped under a subject heading, these references appear also under minute detailed entries. Thus, references listed under Radiation detection instruments are also found under the appropriate specific radiation-detection instruments which are listed as "see also" entries under Radiation detection instruments.

NUMERICAL INDEX OF AEC REPORTS

NUMERICAL INDEX OF AEC REPORTS WITH INDICATIONS OF THEIR AVAILABILITY

Following is a complete list of MDDC's, AECD's, AECU's, unclassified reports issued by AEC contractor laboratories under laboratory numbers, and certain other reports of interest to the AEC as abstracted in Abstracts of Declassified Documents (ADD) or in Nuclear Science Abstracts (NSA) through December 15, 1951. This list gives the report number, abstract number, and availability. Availability refers to: (1) publication of reports in their entirety in ADD or in NSA: (2) publication of reports in the National Nuclear Energy Series (NNES): (3) publication of reports in journals; and (4) public sale of reports by the Office of Technical Services (OTS) with an indication of their price. In some cases, reports listed with a sale price may be out of print, but OTS is prepared to sell photostats and microfilm of all titles in their possession. All non-classified AEC research and development reports are or will be supplied to the 40 AEC depository libraries throughout the USA. Reports may be examined at or borrowed from these libraries, and microfilm or photostat copies may be purchased from them. Inquires should be addressed to the libraries.

Abstracts of AEC reports, and indexes thereto, also are available at the depository libraries. A list of the depository libraries follows this list of reports.

Abbreviations used below are:

NSA - NUCLEAR SCIENCE ABSTRACTS

ADD - ABSTRACTS OF DECLASSIFIED DOCUMENTS the predecessor of NSA

NNES - National Nuclear Energy Series, published by the McGraw-Hill Book Company

Code designations are assigned as follows:

MDDC - To declassified reports released by the Manhattan Engineer District and by the Atomic Energy Commission before March 1, 1948.

AECD - To declassified reports released by the Atomic Energy Commission after February 29, 1948 (appeared in April 15, Nuclear Science Abstracts)

AECU - To unclassified reports originating within the Atomic Energy Project. (Subsequent to AECU-871, this code is applied only to reports carrying no other recognized code designation.)

NP - To reports originating outside the Atomic Energy Project (Note: NP is part of an AEC file number for such reports.)

Other code designations below are assigned to unclassified reports by the originating installations
